■ **ABSTRACT.** A list of the 130 known species of Anthocoridae to occur in the Neotropics is presented. They are arranged in three subfamilies, seven tribes, and 36 genera. Distributional data and bibliographical references of each taxon are also included. Two genera restore generic level; there are 13 new combinations, two genera and seven species synonymized and 11 lectotypes were designed.

KEY WORDS. Catalogue. Neotropical Anthocoridae.

■ **RESUMEN. Catálogo de las Anthocoridae Neotropicales (Heteroptera).** Se ofrece una lista de las 130 especies conocidas de la Región Neotropical de Anthocoridae, que se incluyen en las tres subfamilias hoy aceptadas, en siete tribus y 36 géneros, que se encuentran presentes en esta región, se da la distribución y referencias bibliográficas para cada taxón mencionado. Dos subgéneros recuperan el nivel genérico; hay 13 nuevas combinaciones, dos géneros y siete especies como nuevas sinonimias y se designan 11 lectotipos.

PALABRAS CLAVE. Catálogo. Anthocoridae neotropicales.

INTRODUCTION

The family Anthocoridae Fieber, 1836, erroneously mentioned by some authors (Blatchley, 1926; Froeschner, 1981 and 1985) as Amyot & Serville, 1843, includes the subfamilies Lasiochilinae Carayon, 1972a, Lyctocorinae Reuter, 1884 and Anthocorinae Fieber, 1836.

A complete list of the Neotropical Anthocoridae is lacking. Stål (1873) presented the first list for the extraeuropean Anthocoridae, including nine species arranged in eight genera. Reuter (1884) redescribed all the known, and several new taxa of this family. This pioneer work, which includes 39 Neotropical species in 13 genera, being the most complete reference for heteropterists for a long time. Champion (1900) made the last comprehensive study of the Mesoamerican fauna, listing 19 genera and 54 species. After it, only partial studies concerning Neotropical "pirate bugs" were published by Pennington (1921) for Argentina, da Costa Lima (1940) for Brazil, Ruffinelli & Piran (1959) for Uruguay, Froeschner

(1981) for Ecuador, Froeschner (1985) for Galapagos and Carpintero *et al.*, (1996) for Nicaragua. The purpose of this contribution is to provide a complete enumeration of all known species of Anthocoridae from the Neotropics.

The structure of the "Catalogue of the Heteroptera of the Palaearctic Region" (Aukema & Rieger, 1995) is used here. Valid names of genera and subgenera are given with author and date in bold, centred headings. Under the heading the valid name and the synonyms are given in chronological order with a reference, information on original rank, availability, homonymies, and synonymization, or changes of rank. The type species is always mentioned. Valid names of species are cited as bold, left margined headings. Under the heading, valid name and synonyms are given in chronological order, with reference, information on availability, homonymy, and synonymization or change of rank. Information on type material is given as complete as possible, v.g. Category: sex, type-locality, repository. The categories of types are given as follows: HT for holotype, LT for lec-

totype, and STS for syntypes. Names of countries in type-localities are abbreviated as under distribution. The abbreviations together with full data on the repositories are listed below. Distributional information (Dist.) is given for each species represented in the Neotropical Region. Names of countries are abbreviated with a unique two letter code as listed below. New records are not indicated as must (nearly 75%) of the distributional information is new. Under references (Ref.) the complete bibliography of each neotropical taxon is given, as well as the most important bibliography for Anthocoridae from other regions.

Taxonomical Changes proposed here

Restored generic level: *Dilasia* Reuter, 1871b and *Dasypterus* Reuter, 1871b.

New combinations (N. COMB.): *Anthocoris obsoletus* (Blanchard, 1853). *Cardiastethus elegans* (Blanchard, 1853); *Cardiastethus testaceus* (Blanchard, 1853); *Dasypterus discifer* (Stål, 1860); *Dasypterus ophthalmicus* (Reuter, 1884); *Dilasia ashlocki* (Herring, 1966a); *Dilasia basalis* (Reuter, 1884); *Dilasia foveicollis* (Champion, 1900); *Dilasia reuteri* (Champion, 1900); *Dilasia unicolor* (Reuter, 1884); *Eusolenophora divisa* (Champion, 1900); *Lasiocolpus rostralis* (Poppius, 1909); *Plochiocoris pilosus* (Reuter, 1908).

New synonymies (N. SYN.). Genera: *Dolichiella* Reuter, 1908 (= *Plochiocoris* Champion, 1900); *Whiteiella* Poppius, 1909 (= *Lasiocolpus* Reuter, 1884). **Species:** *Anthocoris parvulus* Blanchard, 1853 (= *Orius insidiosus* (Say, 1832)); *Lasiochilus comitalis* Drake & Harris, 1926 (= *Dilasia fuscula* Reuter, 1871b); *Lasiochilus fraternus* Uhler, 1894 (= *Alofa sodalis* (Buchanan-White, 1879)); *Lasiochilus gerhardi* Blatchley, 1926 (= *Lasiochilus mirificus* Drake & Harris, 1926); *Orius reedi* (Buchanan-White, 1879) (= *Orius brevicollis* (Blanchard, 1853)); *Plochiocoris comptulus* Drake & Harris, 1926 (= *Plochiocoris longicornis* Champion, 1900); *Poronotus bicolor* Poppius, 1909 (= *Alofa sodalis* (Buchanan-White, 1879)).

Lectotypes (HEREIN DESIGNED): *Dilasia reuteri* (Champion, 1900); *EuLasiocolpus megalops* Champion, 1900; *Eusolenophora divisa* (Champion, 1900); *Lasiochilus pallidulus* Reuter, 1871b; *Lasiochilus punctipennis* Champion, 1900; *Lasiocolpoides ciliatus* Champion, 1900; *Lasiocolpus elegans* Reuter, 1884; *Lasiocolpus*

minor Champion, 1900; *Lasiocolpus unicolor* Poppius, 1909; *Plochiocoris longicornis* Champion, 1900; *Plochiocoris pilosus* (Reuter, 1908).
